**Purpose of Contact:** Lip Area Boundary Remediation

**Discussion:**

Five locations were identified above RFCA action levels during the Final Survey surface radiological characterization project. KH intends to excavate approximately 6-inches of soil from the following five locations (see table below) at the perimeter of the outer lip area. Each area will be excavated in a 33-foot diameter (10-meter) circle centered on the coordinate. The soil will be excavated with a tracked excavator and placed into an off-road truck. The truck will transport the soil to the 664 or 371 area where it will be stockpiled with existing soil.

Following the excavation, a confirmation sample will be collected at the same northing and easting location listed in the table below and analyzed off-site for alpha spectroscopy.
